RTWorkspace™ Software optimizes workflow in busy radiation oncology clinics

Middleton, Wisconsin, July 1, 2009 – Standard Imaging, Inc. recently released RT Workspace Software, a first of its kind workflow management solution designed by and for busy radiation therapy professionals. RT Workspace fills a gap that Record and Verify systems do not offer by preventing communication breakdowns and keeping patients from ‘falling through the cracks.’

Today many radiation treatment facilities are dealing with increased workloads, larger facilities and geographically diverse satellite sites. Because of this, the traditional whiteboard communication tool does not offer the necessary efficiencies. RT Workspace overcomes this problem by *computerizing the whiteboard* and putting it at the fingertips of every clinician in the multi-step treatment planning process. By streamlining the communication process RT Workspace helps identify where process improvements will have the most effect, resulting in time and cost savings and better patient experiences.

‘I really love working with this incredibly user friendly software, and honestly think it has improved the quality of care we are able to provide at our clinic,’ said Candace Bletscher, MS about RT Workspace. Dr. Jon Stella stated, ‘With RT Workspace, I don’t have to keep calling our dosimetrists and physicist -- I don’t know how clinicians can work without it.’

RT Workspace also features innovative communications techniques such as electronic sticky notes and to-do lists, workflow analysis and reporting tools, and the ability to collect, analyze and store physics information such as monthly TG-40 linear accelerator QA data in a single easily accessed secure database.
